📍 Syria, Damascus, Jaramana | 🎂 DOB: 12/03/2000 | 👤 Gender: Male

Software Engineering graduate from Damascus University with mid-level expertise in Back-End development using Laravel. Passionate about building scalable, efficient, and secure applications. Committed to clean architecture and high-performance coding standards to drive impactful business results.

EDUCATION

Software Engineering at Damascus University

2019 - 2024

EXPERIENCE

Back-end Developer at Nuhieh

July 2026 – August 2026

Back-end Developer for an electronic school platform, responsible for full-stack backend development, including database design, architectural planning, and implementing robust backend systems to support educational operations.

- Nuhieh is a hybrid school platform bridging self-paced and classroom learning, designed to streamline communication and management between administrators, teachers, parents, and students. The platform features comprehensive tools for managing classes, timetables, assessments, and academic assignments.

Full-time Laravel Developer at HabApps

February 2026 – July 2026

Backend, Server, and Database Lead for the Kozee real estate application. Developed RESTful APIs, managed database design and queries using MySQL, and handled server-side infrastructure.

- Kozee is a comprehensive real estate platform facilitating property browsing through smart search, map-based discovery, and engaging short-form video reels to streamline the connection between property owners and clients.

Freelance Laravel Developer at Dotnokta

August 2023 – April 2024

- Developed and maintained a project using Laravel with clean architecture.
- Working with the team and providing software solutions and advice.

SKILLS

- Laravel | PHP | DataBase Design and SQL
- HTML, CSS, JavaScript
- MVC, Façade, Repository Design Patterns

- RESTful APIs | CI-CD | Clean Architecture
- Agile | GraphQL | Git | Jira | AOP
- WebSocket | Testing | Docker | Firebase

VOLUNTEER

Back-End Developer at Reparametrize Research Platform

July 2025 – Current

Backend Leader for developing a map application for the research team to place various markers (such as hospitals, destroyed buildings, and green spaces) supporting multiple marker geometries (points, areas, polygons, and lines with multiple points). Currently developing a comprehensive platform for managing the foundation's operations including task management and internal systems.

JCI Damascus

April 2026 – Present

Member of a global non-profit organization focused on developing leadership and entrepreneurship skills. Contributing to initiatives across four pillars: International Cooperation, Business & Entrepreneurship, Community Impact, and Individual Development.

LANGUAGES

Arabic: Native

English: Good writing, good reading, good speaking

PROJECTS

Care Me

Designed and implemented the full-stack backend infrastructure for a comprehensive clinic management application, establishing a secure and scalable architecture to handle complex healthcare workflows.
Architected high-performance RESTful and GraphQL APIs to support real-time doctor-patient interactions, persistent chat, and automated notifications powered by WebSocket integration.
For more details on LinkedIn

AdVance

Engineered the entire server-side architecture and database model for an enterprise digital advertising platform connecting advertisers with host applications.
Developed robust, secure financial transaction APIs powering digital wallets, ad serving management, and real-time ledger updates.

BriefCode

Spearheaded the backend engineering of BriefCode, a low-code mobile app development platform featuring drag-and-drop capabilities and simple code writing, which automatically generates complete code for cross-platform applications.
Implemented custom compilers and Aspect-Oriented Programming (AOP) constructs while optimizing concurrent resource competition and design patterns to ensure seamless app compilation and rendering.
