🌐 ward-alshaheen.github.io | 💻 github.com/Ward-Alshaheen | 📍 Damascus, Syria | DOB: 12/03/2000

Software Engineering graduate from Damascus University with proven expertise in back-end development using **Laravel** and **NestJS (TypeScript)**. Skilled in architecting scalable, high-performance, and secure server-side applications. Committed to clean architecture, fine-grained access control (RBAC/PBAC), and reliable DevOps practices to deliver robust, enterprise-grade digital solutions.

EDUCATION & LANGUAGES

Software Engineering at Damascus University (2019 – 2024)
Arabic: Native | **English:** Good writing, reading & speaking

---

EXPERIENCE

Back-end Developer at Nuhieh | July 2026 – August 2026

• Led full-stack back-end development for an electronic school platform, orchestrating database schema design, system architecture, and core business logic implementation to streamline academic operations.

• Engineered hybrid learning management features that bridged self-paced and classroom workflows, facilitating seamless communication between administrators, educators, parents, and students across timetables, assessments, and gradebooks.

Full-time Laravel Developer at HabApps (kozee-sy.com) | February 2026 – July 2026

• Served as Backend, Infrastructure, and Database Lead for the Kozee real estate platform, architecting high-throughput RESTful APIs, optimizing complex MySQL query performance, and managing Dockerized micro-deployments.

• Scaled property discovery through interactive geo-spatial mapping, short-form media streaming, saved search alerting, an automated Banner & Native Ads analytics engine, and tiered agent subscription management systems.

Freelance Laravel Developer at Dotnokta | August 2023 – April 2024

• Developed and maintained web applications using Laravel adhering strictly to Clean Architecture, SOLID design principles, and enterprise design patterns.

• Partnered with cross-functional engineering teams to deliver technical consulting, code reviews, and architectural guidance across multiple web projects.

SKILLS

Backend & Databases: Laravel | PHP | NestJS | TypeScript | Database Design & SQL (MySQL, PostgreSQL) | Prisma ORM

Architecture & Security: Clean Architecture | MVC, Façade, Repository Design Patterns | AOP | SOLID | RBAC & PBAC

APIs & DevOps: RESTful APIs | GraphQL | WebSocket | Docker | CI/CD | Testing (PHPUnit, Vitest & E2E) | Swagger | Git | Jira | Firebase | HTML, CSS, JS

VOLUNTEER & LEADERSHIP

Back-End Developer & Senior Leader at Reparametrize Research Platform | **July 2025 – Current**
Directed back-end engineering initiatives (208+ hours), delivering a geospatial mapping application that processes complex geometric vector data (points, multi-point lines, polygons) for post-crisis urban recovery markers, integrated task management systems, and AI research pipelines.

JCI Damascus (Junior Chamber International) | **April 2026 – Present**
Contributed to leadership and technological entrepreneurship initiatives spanning International Cooperation, Business Development, Community Impact, and Professional Skill Acceleration.

FEATURED PROJECTS

Kozee — Real Estate Ecosystem (kozee-sy.com) | **Laravel 11 • MySQL • Docker**
Engineered the full production backend powering the Kozee web portal (https://kozee-sy.com/), mobile apps, and admin dashboard. Built OTP phone authentication (Sanctum), Spatie RBAC, geo-spatial map discovery, Instagram-style property video reels, Banner & Native Ads click/impression analytics, and customizable agent subscription packages.

CBHA — Cham Behavioral Health Associates (cbha-sy.com) | **NestJS 12 • TypeScript • Prisma**
Architected the centralized production RESTful API powering both the public healthcare portal (https://cbha-sy.com/) and clinical administration dashboard. Implemented granular PBAC security (47 permissions across 15 modules), 19 specialized clinical condition catalogs, Sharp WebP image optimization, Swagger docs, non-destructive Docker seeding, and 141 automated Unit & E2E tests (100% pass rate).

Care Me — Telemedicine & Clinic Suite | **Laravel • GraphQL • WebSockets**
Designed and implemented full-stack backend infrastructure for clinic management, establishing high-performance RESTful and GraphQL APIs supporting real-time doctor-patient interactions, persistent chat, and automated WebSocket notifications.

AdVance — Digital AdTech & Wallet Marketplace | **Laravel • Double-Entry Ledger**
Engineered the server-side architecture and auditable double-entry ledger database for an enterprise digital advertising marketplace connecting advertisers with host applications, powering secure digital wallets, ad serving, and real-time balance settlements.

BriefCode — Low-Code Mobile App Engine | **PHP Core • AOP • Compilers**
Spearheaded backend engineering for a low-code mobile development platform featuring drag-and-drop visual builders and automated cross-platform code generation using custom compilers, Aspect-Oriented Programming (AOP), and concurrent resource scheduling.
